## Evening Brief

Date: Saturday July 21<sup>st</sup> , 2018

### Weather Summary

Yesterday's lightning across the northern third of NV and UT & far southern ID had a mix of wet & dry strikes. Otherwise wetter storms occurred mainly south of I-80. Similar area of mixed wet and dry thunderstorms Sunday north of I-80, wetter to the south. Fuels are dry enough over the northern half of NV into Idaho to better support new ignitions and growth. For this reason, **High Risk** has been issued for some areas of Nrn/Wrn NV, UT and Srn ID.

Hot, dry and breezy conditions will exist today across Idaho. Haines Indices will also be moderate in Nrn NV and ID, where there is ongoing large fire activity.

### Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	3	Moderate Initial Attack Activity
National	3	New Fires and Acres: 34 fires for 3,285 acres; 136 acres large fire growth

Great Basin Fuel Status [interactive link](#) (Use Edge, Chrome or Firefox browsers)

**Fuels and Fire Behavior advisory has been issued for [Nevada](#)**

### Fire Potential

Sagebrush live fuel moisture values are near to below normal across Utah, Southern Nevada and the AZ Strip however have flattened out or begun to increase due to the recent persistent moisture. Elsewhere across the geographic area the sagebrush live fuel moisture values are closer to normal or even above normal for mid-July, but have peaked and are on the downward trend rapidly due to recent hot/dry weather.

Fire danger values continue to drop over southern Nevada, the AZ Strip and southern Utah, with most areas below the 50th percentile. Over the rest of Utah, ERCs have lowered as well, but recent hot weather has kept the ERCs in the 70th - 90th percentile. Continued higher humidity and scattered wetting rains into next week over the southern and eastern portions of UT/NV and the AZ Strip should minimize any ignitions from growing rapidly.

ERCs will briefly fall across western and northern Nevada with the showers the next few days. Idaho fuels will continue to steadily dry with rising ERC's as warm, dry weather continues, with current ERCs in the 70th - 90th percentile. The significant carryover fuels from 2017 and additional critically dry fine fuel crops from the spring rains in western/northern NV into parts of southern ID/western UT are still significantly contributing to fire spread. Sagebrush fuel moisture continues to decrease in these areas with fuel moisture now below critical levels across parts of northern NV into Idaho and contributing to fire spread.

#### Resources:

##### Aviation within the Great Basin

- 1 VLAT, 5 LATs
- 21 SEATs
- 11 Type 1 Helicopters / 7 Committed
- 10 Type 2 Helicopters / 7 Committed
- 20 Type 3 Helicopters

##### Crews Committed within the Great Basin

- 13 IHCs Committed / 0 Available
- 30 T-2 IAs Committed / 8 Available
